

General Purpose-Snap-In Terminal HL,LL Series

ALUMINUM ELECTROLYTIC CAPACITORS

- * Large capacitance and low profile.
- * Assembly to the P.C. Board easily and steadily. Need not any mounting hardware or tool.
- * Excellent shock resistance.

Operating temperature range:

16~100WV: -40°C~+85°C
160~450WV: -25°C~+85°C

Capacitance and tolerance:

Capacitance measurements shall be made by the bridge method at a frequency of 120Hz_{-5}^{+10} Hz, 25°C

The capacitance shall be within the specified tolerance of $\pm 20\%$.

Leakage Current: Measurement shall be made at rated DC voltage with an application of a steady source of power. A current-limiting resistor of 1,000 ohms shall be connected in series with each capacitor under test. Rated DC working voltage shall be applied to the capacitor for 5 minutes before making the leakage current measurements.

The maximum leakage current shall not exceed the value determined from the following equation or 3000UA, whichever is greater:

$$I = 0.02CV$$

where: I = Leakage current (μA)
 C = Nominal capacitance (μF)
 V = Rated DC voltage (V.DC)

Dissipation Factor: Measured at a frequency of 120Hz_{-5}^{+10} Hz, the dissipation factor shall be less than the values in Table 1.

Table 1.

Rated Voltage (V.DC)	CV $\leq 100,000$ Dissipation Factor (%)	CV $\leq 330,000$ Dissipation Factor (%)	CV $> 330,000$ Dissipation Factor (%)
16, 25	40	50	60
35, 50, 63	30	40	50
80, 100, 160	25	35	45
180, 200, 250	20	30	40
350, 400, 450	30	—	—

Low temperature characteristics: The ratio of the impedance of -25°C or -40°C to that of +20°C shall be less than the values listed in Table 2.

Table 2.

Rated Voltage (V.DC)	Ratio of Impedance	
	$\frac{Z @ -40^\circ\text{C}}{Z @ +20^\circ\text{C}}$	$\frac{Z @ -25^\circ\text{C}}{Z @ +20^\circ\text{C}}$
16~100	12	3
160~450	—	3

Life test: The capacitors shall be placed in an air-circulating thermostatic test chamber and application of rated DC voltage through a series protective resistor (1,000 ohms) for a period of 1,000 hours at a temperature of $85^\circ\text{C} \pm 2^\circ\text{C}$ (shielded from direct heat radiation). The capacitors shall then be removed from the test chamber and allowed to cool to room temperature after which they shall meet each of the requirements listed in Table 3.

Table 3.

Leakage current	Same as specified under Leakage Current
Capacitance	Within $\pm 20\%$ of initial measurements
Dissipation factor	150% less of values in Table 1.
Appearance	Free from leakage of electrolyte and/or other noticeable deformation

Shelf life test: Prior to testing, each capacitor in the test group is measured for capacitance, dissipation factor and DC leakage current.

The capacitors are then stored with no voltage applied at temperature of $85^\circ\text{C} \pm 2^\circ\text{C}$ for 500 hours ± 12 hours. Following this period the capacitors shall be removed from the test chamber and be allowed to stabilize at room temperature. Next they shall be connected to a series limiting resistor with DC rated voltage applied for 30 minutes after which the capacitors shall be discharged. After completion of these procedures, the capacitors shall meet each of the requirements as listed in Table 3.
